Subject: [TTA] Canton Reliability Verification Test (TTA-26-01788): Response to Inquiries (Nodeinfra)
To: ██████████
Cc: TTA Blockchain Business <██████████@tta.or.kr>

Dear Manager, this is Senior Researcher ██████████ at TTA.

I have compiled our responses to your test-related inquiries.

1. Response on the publication scope of deliverables

This test is linked to the Canton Foundation's grant program (Dev Fund), and the Foundation has asked for the verification results and related deliverables to be made public. We would appreciate it if you could review whether the public/non-public criteria we have drawn up internally raise any concerns from TTA's perspective.

■ 1. To be published (GitHub, Apache 2.0 license)

- Deployment and configuration scripts: node initialization, topology configuration scripts, etc.
- Host tuning settings: OS, JVM, and Postgres tuning values
- Version-pinned Canton runtime configuration files (participant, sequencer, mediator)
- Benchmark tooling: in-house TPS measurement and fault-injection tools built on Canton's open-source performance benchmark, with reproduction procedures
- Test harness: automated test code for each reliability and security criterion
 - Any parts that reveal TTA test item names, check items, or expected values will be removed before publication
- Engineering retrospective: problems found during verification, the fixes made, and deployment lessons
 - => (TTA) We consider the items you listed publishable.

■ 2. To be cited externally (press releases, blog posts, presentations, etc.)

- The fact that TTA Blockchain Reliability Verification (BRV) was obtained
 - Test report number and date of issue
 - Headline figures (e.g., TPS, number of BFT node faults tolerated)
 - Names of the verified guideline requirement areas (consensus and fault tolerance, key management, smart-contract security, privacy, etc.)
 - Only the area names will be mentioned; the test methods for each area will be left out
- => (TTA) Apart from the test report number, we consider the items above acceptable to state.
However, press releases and blog posts must be reviewed by TTA's External Relations Department, so please send them to us before distribution.

■ 3. Non-public (treated as TTA-confidential)

- The entire submission package: application form, system description, architecture documents, operating procedures
- TTA evaluation checklist (list of evaluation items and pass/fail criteria)
- Mapping table between guideline requirements and test items
- Detailed test contents: test procedures, input values, pass/fail conditions, test logs
- The original result report (test report), item-by-item scores, and pass/fail results

=> (TTA) That is correct.

■ Points we ask you to confirm

1. Whether there is any problem with publishing items 1 (published) and 2 (external citation) above
2. Whether there are set rules or a prior-approval procedure for using TTA's name or logo, or for citing the test report
3. If any items in the classification above need adjusting, please let us know

=> (TTA) Regarding 2: once the test verification is complete, statements at the level of "Verified by TTA, TPS ~" may be made. The test report may not be distributed.

====

2. Test agreement

=> (TTA) We are sending you our reviewed draft of the test agreement. Please see the notes in it.

■ 1. A change to flag first: consensus node configuration

[Redacted: configuration details]

=> (TTA) Confirmed. No change to the test period or the quote.

[Redacted: items 2-5 (pass/fail criteria and test-item details, TTA-confidential)]

■ 6. Test schedule and location

[Redacted: our scheduling request and test location]

=> (TTA) We would like to proceed with 10/6 (Tue) – 10/16 (Fri). Please let us know whether this schedule works for you. If it does not, late November to early December is also possible.

[Redacted: remaining TTA replies, section 3 (fees), and signature]
